

FACTORY DESCRIPTION

Winalite International possesses the world's top-class napkin production facilities, located in Gaoming, Guangdong Province, China. Having reached the hygienic level of "Cleanliness Class 300,000", the leading factory in Gaoming is equipped with multiple sets of world-class, advanced and fully automated sanitary napkin production facilities that produces billions of US Dollars of innovative products every year.

- ISO 9001 QMS Certified
- 40,000 square meter Factory Space
- Clean, Beautiful, Natural Production Environment
- 300,000 Cleanliness Class Standardized Workshop
- Fully-Automated Production Line
- Production Process Observation Corridor
- Sample investigators are required to wear sterilized gloves
- All tools undergo high pressure sterilization
- Lab technicians must always wear protective overalls and work shoes, then pass through an air shower channel before entering the production room
- All clean bench countertops are sterilized with alcohol
- Experiments are performed in 10,000 Cleanliness Class Microbe Testing Room

WINALITE

WinIon™

*Smiles Come from the
Most Tender Care*

WHY WINION™?

Sanitary napkins are vital to any woman's health. They stay as close friends for over 40 years during their life. The only choice then is the most comfortable, healthiest, and safest brand.

STUDENT

During my periods I couldn't concentrate in class, and couldn't even hang out with friends! I threw away all the annoyance since I started using Winlon™. It has a super subtle **surface and fits just perfectly** against my skin.

OFFICE LADY

Every time at work, I would feel that little gush and uneasy. I learned that Winlon's **quick absorbing** napkins stop side leaks, keeping me **dry and clean** without any odors. When I'm using Winlon™, I feel much more confident and beautiful.

Key criteria for success:

- Comfort: Subtle Surface, fully close touch to body
- Well-Being: Breathable Membrane, less moisture and more freshness
- Performance: Leak Guard, protection in an all-round way
- Capacity: Instant Absorption, preventing backflow
- Hygiene: Bactericidal Anion Stripe, eliminating odor
- Convenience: Refastenable Sealing Sticker, ensuring safety in use

HOUSEWIFE

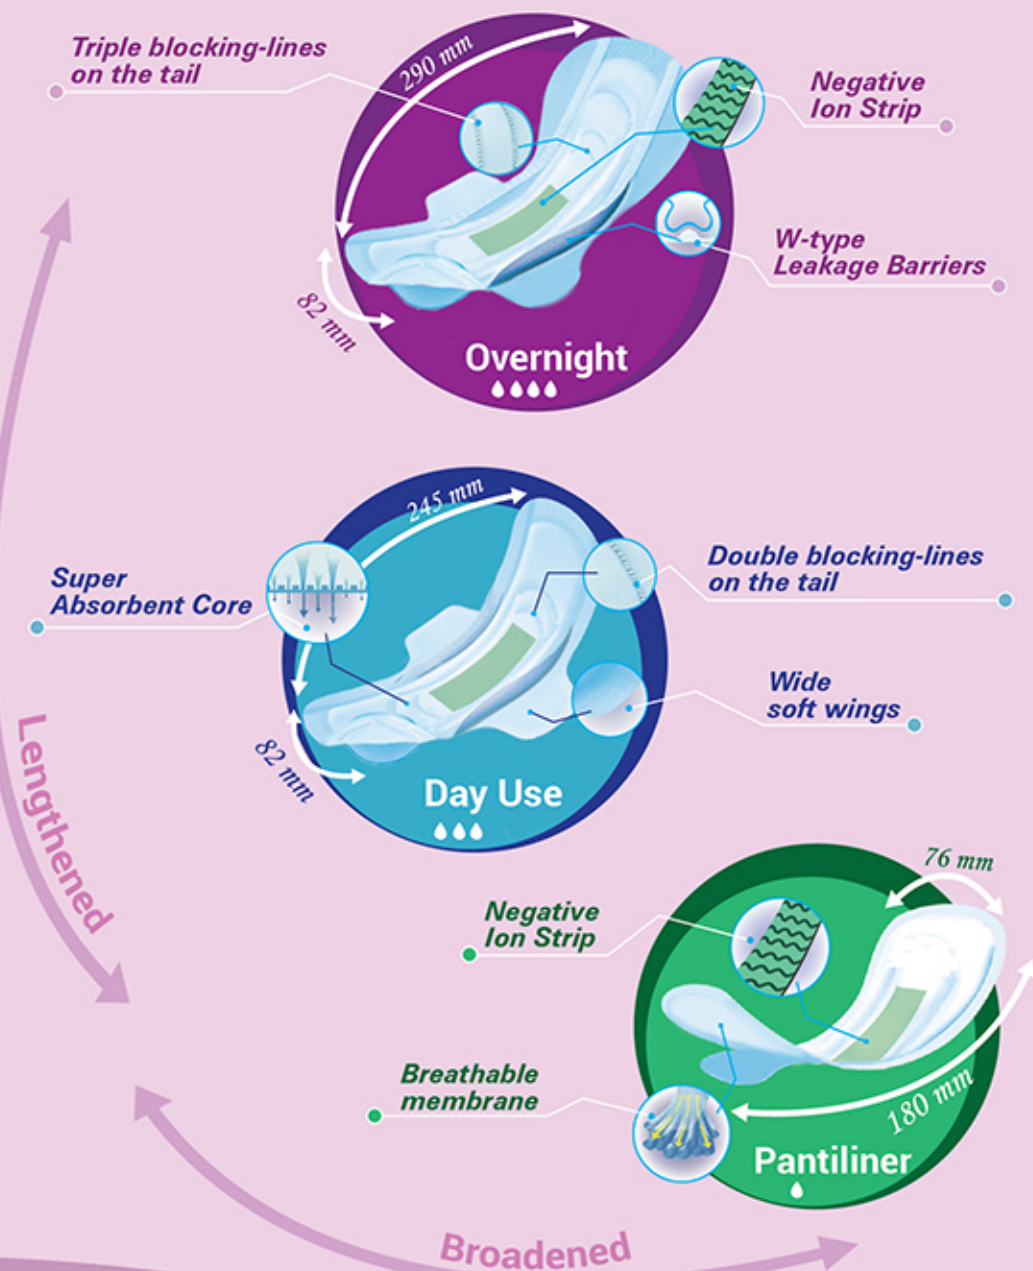

I chose Winlon™ because it's downright safe. It uses individual aluminum foil. The seal is designed with an easy to open and reseal sticky cover to protect **against bacteria** or getting **moist**, and to stop **mildew**. It really puts my heart at ease.

ATHLETE

Winlon™ **breathes well** but doesn't leak at all, so I don't need to worry about sweating anymore. It offers comprehensive coverage **stopping side leaks** so I don't have to think twice about focusing on my exercises!

THE IMPROVEMENTS

THE 7 LAYERS OF WINION™

LAYER 1

Top sheet: a soft and delicate, quick absorbing lining. Funnel-shaped pores allowing instant infiltration while preventing backflow, effectively reducing allergies.

LAYER 2

The far infrared anionic tape: harmless and safe for sensitive skin, the anion stripe radiate far infrared, stimulates circulation, enhances metabolism, deodorize and reduces inflammation.

LAYER 3&5

Two sheets of Sterilized Dust-free Paper are used to sandwich the absorbent agent.

LAYER 4

High effective absorbent agents (imported from Japan) quickly congeals the infiltrating liquid to non-swelling jelly, not flowing back even after pressing it prevents from blood soaking.

LAYER 6

Back sheet: Breathable Membrane, which is permeable to air but not water, evacuates moisture effectively, keeping you fresh and dry.

LAYER 7

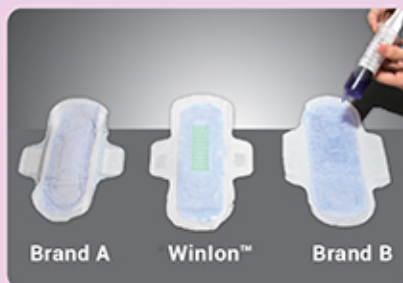

The press-on adhesive stripes employs an ergonomic, intermittent design that breathes well without any irritating residues.

EXPERIMENTAL USES

HOW TO CHOOSE YOUR MOST SUITABLE NAPKIN?

EXPOSING THE NAPKIN'S ABILITIES OF ABSORPTION AND ANTI-BACKFLOW.

Many women would feel that using sanitary napkins give off some odors and cause uncomfortable feeling and itchiness. This is why it is important to choose sanitary napkins with high absorption capability and dry surface.

INJECTION TEST

After injecting 50ml of water into the napkin and pressing a piece of tissue on it during 10 seconds.

Result: After pressing on and releasing the tissue paper, Winlon™ napkin remains comfortable, dry and clean.

EXPOSING THE AIR PERMEABILITY OF THE UNDERLYING LAYER OF A NAPKIN.

The air permeability of the napkin is also a very important factor in brand choosing. During the menstrual period, the skin specially needs a breathable environment to prevent infection or allergy problems.

VAPOUR TEST

After putting the napkin's basement membrane (layer6) on the top of a cup filled with boiling water, and placing an empty cup upside down on the membrane.

Result: Winlon™ napkin has a super ventilation capacity: the steam is quickly gathered inside the empty cup within 2 minutes.

PRODUCTION QUALITY INSPECTION REPORT

NATIONAL PAPER QUALITY SUPERVISION AND TESTING CENTER (CHINA)

Winlon™ sanitary napkin complies with the microbiological quality of Hygiene standard for disposable sanitary products, and it has the water absorbing capacity over 40 times of the napkin weight, which is 6 times higher than the national standard of "7 times".
